DETAILED ACTION

1. This Office Action is the answer to the BPAI Decision filed on October 31, 2007, which paper has been placed of record in the file.
2. Claims **9, 17-25, 37-46, and 53-62** are pending in this application.

Allowable Subject Matter/Reasons for Allowance

3. Claims **9, 37, and 53** are allowed over the prior arts cited records.

The closest prior arts are:

1) Sirbu (US 5,809,144) discloses a method for purchasing and delivering goods over a network is comprised of the steps of identifying a digital good to be purchased. A purchase price for the digital good is negotiated. After the negotiation step, an authenticated purchase request is sent to the merchant. The merchant encrypts the desired digital good and calculates a first cryptographic checksum for the encrypted good. The encrypted digital good and the first cryptographic checksum together with a timestamp are then transmitted to the customer. The customer calculates a second cryptographic checksum for the received encrypted digital good. The customer creates an electronic payment order containing information identifying the transaction, the second cryptographic checksum, credentials, and the timestamp. The electronic payment order is transmitted to the merchant. The merchant compares the first and second cryptographic checksums to ensure that they match, and if so, the merchant adds an electronic signature and a decryption key to the electronic payment order. The merchant submits the merchant signed electronic payment order and the key to an

Art Unit: 2600

account server for review. The account server reviews the information in the electronic payment order and sends a message, including the key if the review is positive, to the merchant. The merchant forwards the message to the customer. If the message contained the key, the customer uses the key to decrypt the goods. Sirbu does not disclose that the countersigned EPO is sent to the account server "when a disclosure request of service requests and digital signatures is received." In particular, Sirbu does not teach that the step of sending the countersigned EPO is contingent on receipt of a disclosure request. Rather, in Sirbu, the merchant application software automatically sends the countersigned EPO to the account server 16. Although the countersigned EPO includes the EPO already received by the merchant from the user, the EPO sent from the user does not amount to a disclosure request, because Sirbu does not disclose that this EPO contains an explicit or implicit request by the user to the merchant that asks the merchant to disclose the user's service request and digital signature to the account server. As such, Sirbu fails to disclose the step of "providing said service request and said digital signature to said accounting terminal when a disclosure request of service requests and digital signatures is received."

2) Fox (US 5,790,677) discloses an electronic commerce system facilitates secure electronic commerce transactions among multiple participants. Each electronic commerce transaction involves at least one commerce document defining the transaction and at least one commerce instrument defining a payment for the transaction. The electronic commerce system has a credential binding server at a trusted credential authority, multiple computing units at associated participants, and a

Art Unit: 2600

communication system interconnecting the credential binding server and the multiple computing units. The electronic commerce system operates in two phases: a registration phase and a transaction phase. During the registration phase, each of the computing units generate and send a registration packet over the communication system to the credential binding server. Unique credentials are produced by the credential binding server based upon the registration packets sent back to the computing units. During the transaction phase, an originating computing unit initially requests, receives, and verifies the credentials of expected recipient computing units to ensure communication between authenticate participants. Thereafter, the originating computing unit signs and encrypts the commerce document(s) and the commerce instrument(s) in a manner which ensures that only the intended recipients can decrypt them. The originating computing unit then sends both the commerce document(s) and instrument(s) over the communication system to a first recipient computing unit. The first recipient computing unit decrypts and verifies the commerce document(s) and/or instruments intended for it. The first recipient computing unit then passes the balance of the encrypted commerce document(s) and/or instrument(s) over the communication system to a second recipient computing unit, which decrypts and verifies the commerce document(s) and/or instrument(s) intended for it. This process is continued until all commerce documents and commerce instruments are distributed, decrypted, and verified by their intended recipients. Similarly as Sirbu, Fox does not disclose that the PO is sent to the acquirer "when a disclosure request of service requests and digital signatures is received." In particular, Fox does not teach that the step of sending the PO

is contingent on receipt of a disclosure request. Rather, in Fox, the merchant sends the signed PO to the acquirer 406. Although the signed PO includes the PO already received by the merchant from the user, the PO sent from the user does not amount to a disclosure request, because Fox does not disclose that this PO contains an explicit or implicit request by the user to the merchant that asks the merchant to disclose the user's service request and digital signature to the acquirer. As such, Fox fails to disclose the step of "providing said service request and said digital signature to said accounting terminal when a disclosure request of service requests and digital signatures is received."

Therefore, it is clear from the description of Sirbu's and Fox's inventions that the prior arts do not considered the possibility of: A method for providing a service to a user, comprising: providing said service and said digital signature to said accounting terminal when a disclosure request of service requests and digital signatures is received, **as included in claims 9, 37, and 53.**

4. Claims (17-25), (38-46), and (54-62), are allowed because they are dependent claims of the allowable independent claims 9, 37, and 53 above, in that order.

Conclusion

5. Claims **9, 17-25, 37-46**, and **53-62** are allowed.
